About

The Planetary Sculpture Supper Club is a collection of foods, recipes and stories that typify some of the ways humans unconsciously sculpt the planet's biosphere through eating habits, flavour preferences and food technologies. We hope this semi-regular Supper Club is an opportunity to explore the co-evolution of gastronomy and larger ecological, technological and political systems.

Some scientists are advocating bringing back extinct species using a variety of lab techniques. What is the role of de-extinction and what are the unintended consequences? Will de-extinct species have a habitat? And will they have a place on deli shelves?
